

AASHISH KUMAR SAINI

Software Engineer — Flutter & Cross-Platform Mobile Development

Greater Noida, 203201, India • +91 8368259731 • aashishkumarsaini2000@gmail.com

LinkedIn: linkedin.com/in/aashish-kumar-saini-966981353/ • GitHub: github.com/Aashish-Kumar-saini

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience building high-performance cross-platform mobile apps, having shipped 20+ production news applications across iOS and Android with 45+ commercial app releases. Proficient across the Flutter SDK and Dart lifecycle — reactive state management (GetX, BLoC, Riverpod, Provider), responsive and adaptive UI, native platform channels, REST integration, and local persistence (SQLite, Firestore). Experienced in end-to-end releases on the App Store and Google Play, native iOS (SwiftUI, UIKit, SPM), Smart TV interfaces, and Firebase (Auth, Firestore, Storage, Cloud Functions, FCM, Crashlytics).

TECHNICAL SKILLS

Mobile Frameworks & SDKs: Flutter SDK (Widget Lifecycle, Custom Animations, Adaptive UI, Platform Channels), Dart OOP & Async Streams, SwiftUI, UIKit, Swift Package Manager (SPM)

State Management & Architecture: GetX, BLoC, Riverpod, Provider, Clean Architecture, Repository Pattern, MVC/MVVM

Backend, APIs & Cloud: REST APIs, HTTP Client & JSON Serialization, Firebase (Authentication, Firestore, Storage, Cloud Functions, FCM, Dynamic Links, Crashlytics, Analytics), SQLite, MySQL

Device & Platform Integrations: Google Maps & Location Services, Image Picker, Push Notifications, Deep Linking, Secure API-key configuration (.env)

Programming Languages: Dart, Swift, Kotlin, Java, C++, Python, JavaScript

Web & TV Technologies: Smart TV App Development, HTML5, CSS3, JavaScript (ES6+)

Developer Tools & CI/CD: Git, GitHub, VS Code, Android Studio, Xcode, Firebase CLI, FlutterFire CLI, Google Play Console, App Store Connect

AI-Assisted Engineering: Claude Code, Cursor, GitHub Copilot, Codex, ChatGPT

PROFESSIONAL EXPERIENCE

Software Engineer — Mediology Software

Jun 2023 – Aug 2026 | Gurugram, India

- Architected and scaled Sortd, the enterprise news SaaS platform, engineering robust mobile clients aligning business KPIs with high performance.
- Built, configured, and maintained 20+ cross-platform news apps for iOS and Android using Flutter SDK and the Flutter News Toolkit; led deployment pipelines for 30+ Google Play Store and 15+ Apple App Store releases.
- Engineered and published a custom reusable Flutter recommendation plugin powering personalized content feeds across multiple production client apps.
- Implemented reactive state management using GetX and BLoC, decoupling business logic from UI to achieve consistent 60 FPS rendering and rapid screen updates.
- Engineered push notification workflows using FCM, Firebase Dynamic Links, and custom deep linking schemes, driving a measurable lift in daily re-engagement and retention.
- Integrated Firebase Crashlytics and Analytics, monitoring crash-free sessions (>99.5%) and translating behavioral telemetry into architectural optimizations.
- Built companion native iOS news apps with SwiftUI and UIKit over a 1-year period, maintaining modular in-house frameworks via Swift Package Manager (SPM).
- Developed Smart TV news applications with HTML5, CSS3, and JavaScript, tailoring navigation for TV remotes and custom screen constraints.

Technologies: Flutter, Dart, GetX, BLoC, SwiftUI, UIKit, SPM, Firebase (FCM, Dynamic Links, Crashlytics, Analytics), REST APIs, Git

Software Engineer Intern — Mediology Software

Dec 2022 – Jun 2023 | Gurugram, India

- Contributed to the Sortd Mobile ecosystem, writing clean Dart/Flutter code for flagship apps including Jansatta, Gujarat First, Punjabi Tribune, and Dainik Tribune.
- Engineered the Fintro Quiz App from scratch to production using Flutter, GetX, Google Login, and Cloud Firestore.
- Integrated targeted FCM notifications, deep links, and analytics events into production apps, improving navigation flows and diagnostic visibility.
- Built responsive UI/UX widget hierarchies complying with Material Design and Apple Human Interface Guidelines across form factors.

Technologies: Flutter, Dart, GetX, Cloud Firestore, Firebase Authentication, FCM, Git

KEY PROJECTS

Cross-Platform Production News Applications (20+ Portfolio)

Aug 2023 – Aug 2026

- Delivered 20+ enterprise news apps (Jansatta, Gujarat First, Tribune network) serving high-traffic readership; released across 30+ Play Store and 15+ App Store listings.
- Integrated a bespoke Flutter recommendation engine, HTTP REST caching, FCM push alerts, custom routing, and Crashlytics tracking; synchronized with companion native iOS (SwiftUI/UIKit) modules and Web Smart TV builds.

Fintro Quiz Application

Dec 2022 – Jun 2023

- Designed and shipped a real-time interactive quiz app using Flutter and Cloud Firestore, with Google OAuth sign-in, reactive score computation in GetX, and dynamic data binding.

Calculator & Unit Converter Utility App

Jun 2023

- Built a multi-unit converter (mass, temperature, length) with responsive layouts; integrated FCM, deep linking, Crashlytics, and Analytics.

PERSONAL PROJECTS

CareCircle — Assisted-Living Family Companion App *Flutter • GetX • MVVM*

- Built a mobile app for families to check on loved ones in assisted living: resident selection, a reassurance home screen, recent activity (meals, medications, activities), and privacy-aware sharing preferences.
- Structured as MVVM with GetX for state and dependency injection — repository-backed data layer over a mocked API, dedicated controllers, and centralized named routing.
- Added loading, empty, and recoverable error states with "Try Again", and graceful handling of malformed records (fallback data instead of crashes).

Chat App — Real-Time Messaging with Push Notifications *Flutter • Firebase*

- Built a real-time chat app with Firebase Authentication, Cloud Firestore messaging, and Firebase Storage for user images.
- Wrote a 2nd-gen Cloud Function that triggers on new Firestore messages and sends FCM push notifications to a topic; configured the project with Firebase CLI and FlutterFire CLI.

PlaceKeeper — Favorite Places Tracker *Riverpod • SQLite • Google Maps*

- Built an app to save memorable places with name, photo, address, and map location; supports picking a point on Google Maps or using the device's current location, with map previews.
- Used Riverpod for state management and SQLite for offline local storage; Image Picker for photos; API keys kept out of source control via local .env and platform config files.

Expense Tracker

- Built a responsive expense tracker with a category-wise bar chart, validated add-expense form (bottom sheet, date picker), swipe-to-delete with Undo, light/dark theming, and portrait/landscape layouts.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science & Engineering

CGPA: 7.26 / 10

KCC Institute of Technology & Management, Greater Noida

CERTIFICATIONS & ACHIEVEMENTS

- Flutter & Dart – The Complete Guide (Udemy — Academind / Maximilian Schwarzmüller): responsive/adaptive UI, widget architecture, animations, device hardware integration, REST networking.
- Java Certification (Coding Ninjas); Python Specialization (Coursera — University of Michigan); Soft Skills and Industry 4.0 & IoT (NPTEL).
- Solved 200+ DSA problems on LeetCode and HackerRank; 5-Star Coder badge in Problem Solving on HackerRank.
